This article describes the case of a male patient diagnosed with Non Hodgkin Lymphoma who was treated only with citric acid more than 5 years ago, and he is now free of cancer, confirming again the effectiveness of citric acid as a cancer treatment based on the Scientific Method.

Keywords: Non Hodgkin Lymphoma; cancer; treatment; citric acid.

INTRODUCTION

The hypothesis that citric acid (citrate) is effective as a cancer treatment has been published in Medical Hypotheses, by Elsevier, since March, 2007. ⁽¹⁾ Two years later, in the same journal, was published the first patient with cancer who improved only with citric acid as a cancer treatment, ⁽²⁾ with this article the hypothesis that the citric acid is effective as a cancer treatment is demonstrated, based on the Scientific Method; and now, in this article, demonstrating once again based on the Scientific Method that citric acid is also effective for Non Hodgkin Lymphoma.

CASE REPORT

This is a 45 year old male patient, who presented nodal growths on the neck and armpits on February, 2010. Four months later, on June 24, 2010, a resection of 7 lymph nodes of the neck was performed and the pathology report was Non Hodgkin Lymphoma of high degree of diffuse type and immunophenotype B, studies reported bone marrow infiltration.

The patient decided not to receive chemotherapy and he began taking citric acid orally as is described ⁽³⁾ on July, 2010, at least for 6 consecutive months, his general condition was excellent, he has regained his weight and the results of the laboratory tests for lymphoma were negative, but the most important fact, is that now, 5 years and 10 months after the diagnosis, the patient is still alive and free from cancer, and he only received citric acid for the treatment of his Non Hodgkin Lymphoma.

DISCUSSION

This is the first report in History of a patient with Non Hodgkin Lymphoma who survived 5 years and 10 months only with citric acid as his cancer treatment, which it should be considered as a cure for cancer.

CONCLUSION

I have already published 10 consecutive cases of cancer patients who have improved impressively only with the citric acid treatment that they have received, including patients with

medullary thyroid cancer, ⁽²⁾ peritoneal mesothelioma ⁽⁴⁾ myeloid leukemia, ⁽⁵⁾ Hurthle thyroid tumor, ⁽⁶⁾ endocrine hepatic tumor, ⁽⁷⁾ esophageal cancer, ⁽⁸⁾ multiple myeloma, ⁽⁹⁾ glioblastoma multiforme, ⁽¹⁰⁾ colon cancer ⁽¹¹⁾ and pancreatic cancer ⁽¹²⁾ this patient with Non Hodgkin Lymphoma will be the 11th case reported about the effectiveness of citric acid as a cancer treatment, also, the fact that citric acid (citrate) is effective as a cancer treatment is demonstrated in laboratory animals. ⁽¹³⁾
